"DARK" ISO SHORT HE

Le pompe a pistoni della serie HE offrono una maggiore capacità di aspirazione ad un basso regime di giri. Si rendono pertanto particolarmente idonee per tutte quelle applicazioni idrauliche dove sono richieste alte prestazioni abbinate a velocità di rotazione ridotte.
The piston pumps series HE offer enhanced suction ability at low RPM range. Thus, these pumps are particularly suitable for all those hydraulic applications requiring high performance at low rotation speed.

Fluido idraulico Fluid	Minerale o sintetico compatibile con guarnizioni: Mineral or synthetic compatible with the following seals: HNBR				
Temp. consentita Allowed temperature	-40 +140 °C				
Viscosità cinematica consigliata Kinematic viscosity suggested	T media ambiente (°C) Average ambient temp. (°C)	< -40	-40 ÷ 10	10 ÷ 35	> 35
	VG (cSt = mm ² /s)	16	22	32	46
Viscosità cinematica ottimale di esercizio Optimale kinematic viscosity		VG= 10 cSt ÷ 100 cSt			
Viscosità cinematica max consentita all'avviamento Max kinematic viscosity suggested at the start-up		VG= 750 cSt			
Indice di viscosità consigliato Viscosity index suggested		VI > 100			
Grado di filtrazione Oil filtering		> 200 bar: 10 µm < 200 bar: 25 µm			
Pres. di aspirazione Inlet pressure		0,85 ÷ 2 bar assoluti/absolut			
Senso di rotazione Pump rotation		Unidirezionale sinistra Unidirectional left			

Verificare che la pompa sia posizionata almeno 100 mm sotto il livello minimo del serbatoio olio. Prima di avviare la pompa effettuare spurgo aria.
Verify that pump is, at least, 100 mm under the minimum level of the tank. Before starting the pump bleed the air.

Dimensions in mm

● Larghezza minima corpo a quota indicata ■
Minimum bodywidth at indicated measurement

Tipo pompa Pump type	Rotazione sinistra Left rotation	IN ISO 228	OUT ISO 228
HDT-84	60200310849F	G 1-1/4	G 1
HDT-108	60200311089F		

Nota: la pompa ha senso di rotazione fisso (suffisso F nel codice). Non è possibile invertire il senso di rotazione ruotando il corpo posteriore.

ATTENTION: the pump has fixed sense of rotation (suffix F on part number). It is NOT POSSIBLE to change pump rotation by turning rear-body as in standard version!

Pressione massima continua Max. continuous pressure (100%)
 Pressione massima di punta Max. peak pressure (6 sec.max)

(*) Velocità con tubo diam. interno 63mm (2"1/2) minimo.
 Speed with pipe internal diameter 63mm (2"1/2) minimum.

Coppia teorica assorbita / Theoretical drive torque

La coppia assorbita dalla pompa deve essere calcolata come somma delle coppie necessarie per mandare in pressione le 2 mandate.
 The total torque absorbed by the pump is given by the sum of the torques necessary to give pressure to the pressure ports.

Potenza teorica assorbita / Theoretical power input

La potenza totale è pari alla somma delle potenze richieste dai singoli utilizzi sulle 2 mandate.
 The total power absorbed by the pump is given by the sum of the power required by the two pressure ports.

$$P_{TOT} = P_A + P_B = \frac{(p_A \cdot Q_A + p_B \cdot Q_B)}{612}$$

P [kW]
 Q [l/min]
 p [bar]

 POMPA SINISTRA
 LEFT PUMP

 POMPA DESTRA
 RIGHT PUMP

Momento peso / Mass moment $M_{amm.} = s \times G$ (Nm)

G=Peso in N
 (Peso in Kg x 9.81)
 G=Weight in N
 (Weight in Kg x 9.81)

Pompa 53+53 e 70+35: con tubo diam. interno 50mm (2") velocità max. 1200rpm.
 Pump 53+53 and 70+35: with pipe internal diameter 50mm (2") max. speed 1200rpm.

Pompa 70+53: solo con tubo diam. interno 63mm (2"1/2).
 Pump 70+53: only with pipe internal diameter 63mm (2"1/2).

Portata teorica / Theoretical flow

La portata della pompa è pari alla somma delle portate delle 2 mandate.
 The total pump flow is given by the sum of the flow of each pressure port.

Sceita del tubo di aspirazione

How to choose the suction pipe size

Q Portata Flow	Ø interno min. tubo Minimum pipe diameter		Velocità flusso Flow speed
l/min	mm	inch	(m/s)
30	32	1" 1/4	0,62
40	32	1" 1/4	0,83
50	38	1" 1/2	0,74
60	38	1" 1/2	0,88
70	40	1" 9/16	0,93
80	45	1" 3/4	0,84
90	45	1" 3/4	0,94
100	50	2"	0,85
110	50	2"	0,93
120	60	2" 3/8	0,71
130	60	2" 3/8	0,77
140	60	2" 3/8	0,83
160	63	2" 1/2	0,86
170	63	2" 1/2	0,91
180	63	2" 1/2	0,96

Per garantire corrette condizioni di aspirazione la velocità del flusso non deve superare 1m/sec.
 To ensure the proper suction pipe size the flow speed should not exceed 1mt/sec.

V1=Massima continua Max. continuous speed
V2=Massima intermittente Max. intermittent speed

SCELTA DEL TUBO DI ASPIRAZIONE
HOW TO CHOOSE THE SUCTION PIPE SIZE

Q Portata Flow l/min	Ø interno min. tubo Min pipe diam.		Velocità flusso Flow speed (m/s)
	mm	inch	
20	25	1"	0,68
30	32	1" 1/4	0,62
40	32	1" 1/4	0,83
50	38	1" 1/2	0,74
60	38	1" 1/2	0,88
70	40	1" 9/16	0,93
80	45	1" 3/4	0,84
90	45	1" 3/4	0,94
100	50	2"	0,85
110	50	2"	0,93
120	60	2" 3/8	0,71
130	60		0,77
140	60		0,83
150	60	2" 1/2	0,88
160	63		0,86
170	63		0,91
180	63	2" 1/2	0,96

Per garantire corrette condizioni di aspirazione la velocità del flusso non deve superare 1 m/sec.
To ensure the proper suction pipe size the flow speed should not exceed 1mt/sec.

99761402005 Rev. AA

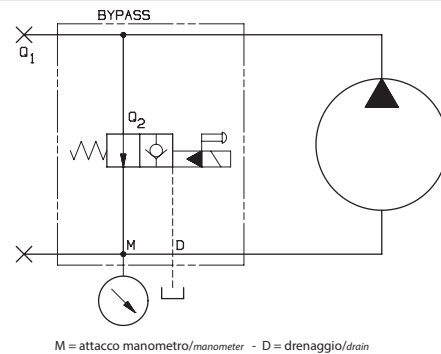

La valvola di by-pass viene utilizzata unitamente alle pompe a pistoni Bent axis HDS nel caso in cui la pompa sia sempre in rotazione quando il veicolo è acceso (montaggio con prese di forza senza innesto o direttamente sul motore). In questi casi tutto il flusso di olio erogato viene mandato in circolo alla massima portata della pompa, concessa dal numero di giri del motore, attraverso tubazioni che solitamente non sono dimensionate per portate superiori a quelle richieste durante il normale utilizzo della pompa, causando perciò perdite di energia inutili nonché surriscaldamenti dell'impianto. La valvola di by-pass svolge la funzione di ricircolare parzialmente il flusso di olio Q della pompa all'interno della pompa stessa in modo che, attraverso le tubazioni dell'impianto, circoli una portata Q1 pari alla differenza fra la portata Q e la portata di riciclo Q2. La ripartizione della portata nei flussi Q1 e Q2 dipende dalle perdite di carico dell'impianto e della valvola di by-pass. È comunque necessario garantire una portata di olio Q1 di almeno 5-10 l/min per assicurare un sufficiente raffreddamento della pompa.

The bypass valve is used together with HDS bent axis piston pumps if the pump turns constantly when the vehicle is on (in installations with the power takeoff without a coupling or coupled directly to the motor). In such cases, all the oil flow delivered is circulated, at the maximum pump capacity permitted by the turning speed of the motor, through piping that is usually not sized for capacities greater than those required for the normal use of the pump, consequently giving rise to pointless energy losses and overheating in the system. The bypass valve serves the purpose of partially recirculating the pump's oil flow Q (see diagram 1) inside the pump so that a flow Q1 (corresponding to the difference between the total flow Q and the recycled flow Q2) circulates through the system's piping. The proportion of total capacity distributed to the flows Q1 and Q2 depends on the system load losses and the bypass valve. In any case, it is essential to guarantee an oil flow Q1 of at least 5-10 l/min to ensure adequate pump cooling.

Istruzioni di montaggio / Mounting instructions

- 1 - Pulire molto bene le superfici della pompa e della valvola che andranno a contatto.
- 2 - Interporre le guarnizioni (o-ring) fornite a corredo, usando grasso, come indicato in figura.
- 3 - Avvitare il particolare **X** ed il particolare **Y** (per coppie di serraggio vedi tabella).
- 4 - Collegare tubi aspiraz./mandata.
- 5 - Collegamento elettrico: la valvola di by-pass è normalmente aperta.
Per utilizzare la pompa in pressione eccitare l'elettrovalvola.

- 1 - Clean the pump and by-pass valve surfaces.
- 2 - Place the o-ring included in the kit as shown in the picture, with grease.
- 3 - Screw in **X** part and **Y** part (see tightening torque in the table).
- 4 - Connect pressure/suction pipe.
- 5 - Electrical wiring-up: the by-pass valve is normally open. To deliver oil you have to energise the solenoid valve.

COPPIE DI SERRAGGIO TIGHTENING TORQUE	
G 1/2	80 Nm
G 3/4	140 Nm
G 1	170 Nm
G 1 1/4	200 Nm
G 1 1/2	250 Nm

ATTENZIONE / WARNING

L'elettrovalvola viene azionata da un interruttore elettrico posto in cabina. La valvola di by-pass viene normalmente impiegata in impianti che prevedono il distributore principale a centro aperto.

Nel caso in cui venga impiegata in impianti con distributore a centro chiuso o nel caso in cui non siano garantiti i 5-10 l/min di portata (Q1) attraverso le tubazioni, è necessario collegare un tubo fra il foro di drenaggio della valvola e il serbatoio.

L'elettrovalvola è dotata di un dispositivo di emergenza in modo che si possa utilizzare la pompa anche in caso di avaria dell'elettrovalvola stessa. Azionamento emergenza di tipo "spingi e gira". La valvola può essere utilizzata indifferentemente per pompe con rotazione destra o sinistra e può essere montata in due diverse posizioni ruotate di 180° in modo da ottimizzarne gli ingombri. Al raccordo da G 1/8 è possibile collegare un manometro per la misura della pressione..

The solenoid valve is operated by an electric switch situated in the cab. The bypass valve is normally used in systems with an open-center main distributor.

If it is used in systems with a closed-center distributor, or if it is impossible to guarantee the minimum flow rate of 5-10 l/min (Q1) through the piping, it becomes necessary to connect a pipe drain valve hole and the tank.

This emergency is "push and twist" type. The solenoid valve is complete with an emergency device so that the pump can be used even in the event of a solenoid valve malfunction. The valve can be used equally for pumps turning either to the right or to the left and it can be installed in two different positions, rotated through 180° so as to make best use of available space. A pressure gauge can be connected to the G 1/8 connection to enable pressure measurements.

- 1 - Pulire molto bene le superfici della pompa e della valvola che andranno a contatto.
- 2 - Interporre le guarnizioni fornite a corredo (e l'anello * se presente), usando grasso, come indicato in figura.
- 3 - Avvitare la valvola by-pass alla pompa con le viti M8x40 (A) fornite senza serrarle completamente.
- 4 - Avvitare il particolare X (per coppie di serraggio vedi tabella), serrare le viti M8x40 con coppia di serraggio di 25Nm e verificare che la superficie della pompa e la superficie della valvola siano completamente a contatto tra loro.
- 5 - Collegare tubi aspiraz./mandata facendo attenzione ad usare raccordi con lunghezza MAX. filetto L=15mm.
- 6 - Collegamento elettrico: la valvola di by-pass è normalmente aperta. Per utilizzare la pompa in pressione eccitare l'elettrovalvola.

- 1 - Clean the pump and by-pass valve surfaces.
- 2 - Place the o-ring (and the ring * if present) included in the kit as shown in the picture, with grease.
- 3 - Screw in the by-pass valve with included screws M8x40 (A) but without tightening.
- 4 - Screw in X part (see tightening torque in near table), tighten the screws M8x40 with torque 25 Nm checking that valve and rear cover surfaces are completely in contact each other.
- 5 - Connect pressure/suction pipes, paying attention to use maximum lenght threaded fittinge = 15mm.
- 6 - Electrical wiring-up: the by-pass valve is normally open. To deliver oil you have to energise the solenoid valve.

G 3/4	140Nm
G 1	170Nm
G 1 1/4	200Nm
G 1 1/2	250Nm

ATTENZIONE / WARNING

L'elettrovalvole vengono azionate da interruttori elettrici posti in cabina. La valvola di by-pass viene normalmente impiegata in impianti che prevedono il distributore principale a centro aperto.

Nel caso in cui venga impiegata in impianti con distributore a centro chiuso o nel caso in cui non siano garantiti i 5-10 l/min di portata (Q1) attraverso le tubazioni, è necessario collegare un tubo da 3/8" fra il raccordo ausiliario della valvola e il serbatoio (utilizzare raccordo G1/4 incluso nella confezione).

L'elettrovalvole sono dotate di un dispositivo di emergenza in modo che si possa utilizzare la pompa anche in caso di avaria dell'elettrovalvole stesse. La valvola può essere utilizzata indifferentemente per pompe con rotazione destra o sinistra e può essere montata in due diverse posizioni ruotate di 180° in modo da ottimizzarne gli ingombri. Ai raccordi da 3/8" è possibile collegare dei manometri per la misura delle pressioni.

The solenoid valves are operated by electric switches situated in the cab. The bypass valve is normally used in systems with an open-center main distributor.

If it is used in systems with a closed-center distributor, or if it is impossible to guarantee the minimum flow rate of 5-10 l/min (Q1) through the piping, it becomes necessary to connect a 3/8" pipe between the valve's auxiliary connection and the tank (use the fitting G1/4 included in the package).

The solenoid valves are completed with an emergency device so that the pump can be used even in the event of a solenoid valves malfunction. The valve can be used equally for pumps turning either to the right or to the left and it can be installed in two different positions, rotated through 180° so as to make best use of available space. A pressure gauge can be connected to the 3/8" connection to enable pressure measurements.

Schema idraulico
Hydraulic scheme

La valvola si applica **direttamente** sul corpo posteriore della pompa in modo che **scarichi direttamente in aspirazione alla stessa senza rendere necessario il tubo verso serbatoio**. La valvola protegge la pompa da sovrappressioni dovute ad azionamenti errati o a impianti lasciati involontariamente con valvole chiuse o con tubi innesto rapidi non collegati. Il fissaggio della valvola sulla pompa è simmetrico, quindi è possibile ruotarla di 180° in modo da evitare possibili interferenze sul veicolo.

This valve can be **directly** fitted on the rear cover of the pump in such a way that **the return flow goes back to tank through the pump itself saving one hose**. The valve protects the pump from peak pressure due to any wrong operations such as closed circuit or coupling not connected. The fitment of the relief valve assembly onto the pump is symmetric, thus it is possible to rotate it by 180° just to avoid any interferences.

ISTRUZIONI DI MONTAGGIO / MOUNTING INSTRUCTIONS

- 1 - Pulire molto bene le superfici della pompa e della valvola che andranno a contatto.
Clean the pump and by-pass valve surfaces.
- 2 - Interporre le guarnizioni (o-ring) fornite a corredo come indicato in figura.
Place the o-ring included in the kit as shown in the picture.
- 3 - Avvitare il particolare X ed il particolare Y (Coppie di serraggio vedi tabella a fianco).
Screw in X part and Y part (See tightening torque in near table).
- 4 - Collegare tubi aspirazione/mandata.
Connect pressure/suction pipe.

TARATURA VALVOLA DI MASSIMA / RELIEF VALVE SETTING

ATTENZIONE / WARNING

La valvola è tarata a **250 bar**. Se necessari valori diversi, agire come segue:
The relief valve is set at **250 bar**. If necessary please set a new value as follows:

A) Svitare il part. 2 avendo cura di mantenere in posizione il part. 1.
Unscrew the part. 2 carefully keeping the part. 1 tight.

B) REGOLAZIONE / SETTING:

Avvitando il particolare 1 la pressione aumenta.
Svitando la pressione diminuisce.
*The pressure increases while **Screwing** the part. 1.
The pressure decreases while **Unscrewing**.*
Controllare la pressione con un manometro.
Check the pressure setting with a pressure gauge.

C) Riavvitare il part. 2 mantenendo in posizione il part. 1.
Lock the part. 2 paying attention to keep into position the part 1.
